

Clinical Note #3

Patient: Evelyn Thompson (72 y/o female)

Chief Complaint:

New onset confusion, agitation, decreased urine output x 2 days

History:

CKD Stage III, CHF, dementia, HTN, recent UTI treated 2 weeks ago, osteoarthritis.

Physical Examination:

Disoriented to place/time, dry mucous membranes. HR 98 bpm, mild bilateral lower extremity edema. Decreased urine output.

Assessment and Plan:

Acute kidney injury likely secondary to dehydration vs recurrent UTI vs med effect. Admit IV hydration, UA/C&S, BMP, CBC, review meds for nephrotoxicity, nephrology consult.
